0.24	22. August, 2016	Targeting Pro-Inflammatory Ce	lls in Idiopathic Pulmonary Fib	rosis: a Human Trial (IPF)		<u>√</u>	<u>clinicaltrials</u>	
	The study team hypothesizes that intermittent (3 doses administered over 3 consecutive days in 3 consecutive weeks) oral administration of combination Dasatinib (100 mg/d) + Quercetin (1250 mg/d) will be safe and well tolerated in patients with IPF. Treatment with D+Q will result in reduced abundance of pro-inflammatory cells within subjects over baseline. Finally, the reduction in biomarkers of cellular pro-inflammatory state will be related to no change in functional and patient reported outcomes.
